

AMGDS 2000

Application module for decon solution GDS 2000

Benefits

- Integrated storage tank
- Highly efficient application
- Easy transport due to built-in wheels and foldaway handles
- High mobility and flexibility due to 15 m long hose

General description

The AMGDS 2000 is the standard module for the continuous application of GDS 2000 as part of a thorough C decontamination process and also for the decontamination of vehicles and road sections etc. The electrically operated pump module ensures fully automatic, uncomplicated application of the decontamination agent with an easily manageable spray mode. The integrated 40 litre storage tank permits GDS canister changeover also during operation. The storage tank is coupled with a filling. The filled storage tank and an affiliated, full 20 l GDS 2000 canister together are making available a total of 60 litres of agent for use without the need to change canisters.

Technical data

Dimensions (L x W x H)	approx. 700 x 550 x 800 mm
Total weight	approx. 130 kg
Flow rate	approx. 8 l/min
Capacity GDS 2000	approx. 40 l
