

DECON SPRAYER DS 10

Compact pressure sprayer with mixing device

Benefits

- Simple handling
- High mobility and flexibility due to low weight and size
- Integrated mixing device
- Special chemical resistant stainless steel

General description

The Decon Sprayer DS 10 is a compact, handy pressure sprayer with integrated mixing device for the immediate and independent mixing and application of decontamination, disinfection or neutralization agents and pesticides or similar. It can be used for the decontamination of small surfaces or persons in protective suits. The integrated mixing device allows the stirring of fluid and powder decontamination agents in order to create solutions or suspensions. It is operated directly by using the hand pump handle. The DS 10 is manufactured from chemical resistant stainless steel. Thus even aggressive chemicals (e.g. acids or leaches) can be used. Ten liters of decontamination solution is sufficient (depending on the decontamination agent) for a surface of up to 50 m².

Technical data

Dimensions (H, ø)	730 mm, 210 mm
Empty weight	9,5 kg
Working pressure	6 bar
Fill volume	10 Liter
