

DECON SPRAYER DS 5

Compact pressure sprayer for mobile applications

Benefits

- Simple handling
- High mobility and flexibility due to low weight and size
- Stable plastic body
- Very good resistance against strong acids and leaches

General description

The Decon Sprayer DS 5 is a handy and portable pressure sprayer for the application of cleaning, disinfection or neutralization agents. It can be used for the decontamination of small devices or persons in protective suits. Due to the low weight the DS 5 does not impose an extra burden on the operators and thus a very mobile and flexible working is possible. The large size filling opening with an integrated funnel allows a problem-free filling and cleaning of the unit. An integrated air pump creates a working pressure of up to 3 bars and in combination with the stainless steel Vario- nozzle makes it possible to apply the respective fluids in very fine doses. The robust, unbreakable plastic body has a filling volume of 5 liters and due to the use of transparent material the filling level can be checked visually at any time.

Technical data

Dimensions (H, ø)	48 cm, 19 cm
Empty weight	2,3 kg
Max. output (3 bar)	1,2 l/min
Fill volume	5 l
