

DECOCONTAIN 3000 GDS

Containerized full decontamination system

Benefits

- Universal, highly mobile CBRN decontamination system
- Simultaneous radioactive decontamination, disinfection and detoxification of materials, equipment and persons
- For use both on the carrier vehicle or separately positioned on the ground
- High flexibility and mobility: Can be mounted on different carrier vehicles

General description

The Decocontain 3000 GDS system encompasses all the essential functional components to provide a secure and complete decontamination centre, permitting the execution of all tasks for the thorough decontamination of individuals, personal equipment, vehicles, road sections etc. The system comes with a central power generator to supply all modules and components with electricity. Using the integrated water tank, the system can be operated on a temporary basis independently of external supplies. All necessary modules and components are ideally integrated into the decontamination system. Decontamination agents can be carried along in the container for deployment in the field.

Technical data

Dimensions (L x W x H)	approx. 6.058 x 2.434 x 2.434 mm
Decontamination of persons	approx. 120 persons/h
Decontamination of machines	approx. 6-8 tanks or 8-12 vehicles/h
Decontamination of equipment	approx. 20-30 sets/h
