

DRINKING WATER DISTRIBUTION STATION

Advantages

- 6 distribution points
- Quick dispensing through pump
- Compact and easy to transport

General

Drinking water distribution stations are necessary after disasters or in camps to supply lots of people with water at the same time. Kärcher Futuretech delivers the right solution.

At the end of the purification chain, it must be possible to dispense and distribute drinking water to the individuals. Thanks to the pump, the drinking water tank must not be higher than the dispense point and distribution is fast. The drinking water distribution station from Kärcher Futuretech offers six aluminium or stainless steel drinking water supply points within a small area. The complete drinking water distribution station with pumps, hoses, and six water taps is accommodated in a compact aluminium box that also acts as packaging.

Technical data

Filling capacity (l/h)	5000
Dimensions (L x W x H) (mm)	800 x 600 x 410
Total weight (kg)	32
Platform	Box
Variants	Aluminium / stainless steel
